

Globbering

wildcards → shell expansion

happens before command

* match 0 or more characters

ls *.txt

→ file1.txt file2.txt

mv file* dir1

→ mv file1.txt file2.txt dir1

☐ dir1

☐ file1.txt

☐ file2.txt

☐ file3.md

2 match exactly one chamber

☐ dir1

☐ dir15

☐ cool.md

☐ cool2.txt

☐ cool10.md

☐ cool3.md

rm cool?.md

→ rm cool3.md

mv cool??..md dir15

→ mv cool10.md dir15

[...] bracket globbing

- ❑ dir1
- ❑ dir15
- ❑ cool.md
- ❑ cool2.txt
- ❑ cool10.md
- ❑ cool3.md

ls cool[1-9].*

→ ls cool2.txt cool3.md

ls [d]*

→ ls dir1 dir15

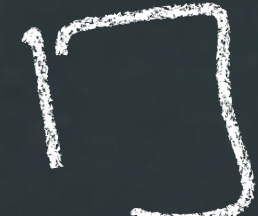

ls [^c]*

→ ls dir1 dir15

Brace expansion

not globbing, but useful

touch note{1..5}.txt

→  ... 
note1.txt note5.txt

mkdir project-{a,b,c}

→   
project-a project-b project-c
